Summary

Product Engineer and team lead building AI-powered 3D dental software and cloud platforms. Experienced across full-stack web, 3D/vision, ML infra, and DevOps, with recent focus on leading team, and shipping production features at startup and scale-up pace.

Work Experience

Gloud

Seoul, South Korea

PE1 TEAM LEAD

Nov. 2024 – Present

- Architected and currently leading the development of a proprietary web-based Dental CAD platform — a core pillar of the company's product vision — designed to replace costly third-party software (e.g., 3Shape, Exocad). The system leverages custom AI models to accelerate the design process for aesthetic dental restorations.
- Built a fully in-house 3D slicing engine from scratch to replace third-party tools, seamlessly integrated with the web-based workflow. The system improves slicing speed and establishes the foundation for future automation.
- Managed the end-to-end development of a Raspberry Pi-based control module, a core component of the company's next-generation 3D printer line. The system enables remote power, network, and camera control via a central admin dashboard, reducing on-site maintenance needs and production costs.
- Refactored a monolithic architecture — previously built on a single domain and shared codebase — into modularized domains and isolated repositories, eliminating cross-service dependencies and significantly improving development velocity.
- Redesigned the platform's UI/UX, data structures, and operational pipeline, dramatically reducing overhead and improving order-processing efficiency for internal operation teams.
- Spearheaded a complete redesign of the payment system, introducing subscription models, rentals, and a prepaid credit system, which simplified the user experience and reduced payment-related support tickets.
- Developed an AI-powered sales support agent that provides real-time, context-aware client insights through a chat interface, effectively eliminating the need for additional in-house support hires.
- Promoted AI-assisted development practices and knowledge sharing within the team, improving development velocity and product quality through faster experimentation and better-informed decision making.
- Led a 5–7 member engineering team, implementing agile workflows, structured project management (GitHub–Google Chat integration), and CI/CD automation across three applications.
- Drove a security overhaul by introducing a role-based access control (RBAC) system and securing publicly exposed storage endpoints, eliminating major vulnerabilities.

Gloud

Seoul, South Korea

PRODUCT ENGINEER

Aug. 2024 – Nov. 2024

- Joined as a product engineer via the acquisition of Steinfeld and was promoted to Team Lead in Nov 2024.

Steinfeld

Remote

SOFTWARE ENGINEER

Aug. 2021 – Aug. 2024

- Early engineering hire (#5) who developed the core AI-driven product from the ground up, directly contributing to the company's acquisition by Gloud in early 2025.
- Co-architected an end-to-end AI pipeline that automatically generates 3D dental crown designs from intraoral scans, reducing the design process from hours to under five minutes.
- Evaluated, benchmarked, and optimized over ten 2D and 3D generative and segmentation models to identify the highest-performing algorithms for each stage of the automated workflow.
- Engineered a scalable training pipeline on GCP Vertex AI, enabling rapid parallel experimentation and deployment, which accelerated model iteration and delivery.
- Implemented a serverless data preprocessing system capable of handling tens of thousands of 3D scan files in parallel, significantly shortening the model training lifecycle.
- Developed and launched a beta web platform (ai.steinfeld.co) for clients to upload scans, receive AI-generated designs, and refine results using an integrated web-based CAD tool.

GE Appliances

Seongnam, South Korea

FIRMWARE ENGINEER INTERN

Jan. 2021 – Aug. 2021

- Developed and maintained C-based firmware for a new washing machine model, contributing to its successful market launch.
- Assisted in integrating a new sub-board for an automated detergent dispensing system, implementing the firmware and communication protocols between main and sub-boards.
- Implemented additional core features such as remote cycle selection and cloud connectivity.
- Authored and submitted four patent applications covering novel appliance technologies, including lint detection via light sensors, laundry clumping detection via accelerometers, water temperature error detection using humidity sensors, and image-based fabric color identification.

Sensorscall

EMBEDDED SOFTWARE INTERN

Atlanta, GA, USA

May 2019 – Jul. 2019

- Contributed to the development of a smart home device (featured at CES 2019 & 2020) by writing firmware in C.
- Implemented key functionalities including VoIP communication, remote Wi-Fi setup, and automatic lighting control based on ambient light data.
- Integrated and programmed multiple sensors (environmental, light, PIR, accelerometer, and microphone) to enable core device features.
- Identified and fixed critical memory leaks, significantly improving device stability and performance.

Skills

Languages	Python, TypeScript, C++, C
AI/ML	PyTorch, Vertex AI, Hugging Face
3D & Vision	Three.js, PyTorch3D, OpenCV, Open3D, Trimesh
Backend	Node.js, Express.js, Python
Frontend	React, Tailwind CSS
DevOps & Cloud	Docker, AWS, GCP, Firebase, Azure, CI/CD

Education

Georgia Institute of Technology

B.S. IN COMPUTER ENGINEERING, GPA 4.0/4.0

Atlanta, GA, USA

Jan. 2019 – Dec. 2020

KAIST (Korea Advanced Institute of Science and Technology)

B.S. IN ELECTRICAL ENGINEERING, GPA 3.95/4.3 (MAJOR 4.2/4.3)

Daejeon, S.Korea

Mar. 2014 – Aug. 2021

- Military service: Oct. 2015 – Jul. 2017

Honors

ACADEMIC HONORS

National Scholarship for Science and Engineering , Korea Student Aid Foundation – Full tuition and stipend for academic excellence	Mar 2014 – Jun 2020
Faculty Honors , Georgia Institute of Technology	Spring 2020
President's Undergraduate Research Award (PURA) , Georgia Institute of Technology – \$1,500 stipend for Rewind project at Embedded Pervasive Lab	May 2020
Grand Societal Challenge Prize (Team Hummingbird Lead) , Cornell Digital Agriculture Hackathon – International consortium of five agriculture universities; Sponsored by Microsoft & Cargill	Feb 2020
Dean's List , Georgia Institute of Technology	Spring 2019
Dean's List , Korea Advanced Institute of Science and Technology (KAIST)	Fall 2018
